

Tutorial 10

Peter Lo

Question 1

- Consider the following structure.

Question 1 (cont')

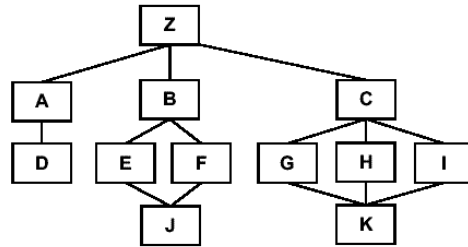

- In the context of the above structure, what do we mean by depth?
- In the context of the above structure, what do we mean by width?
- What is the width of this structure?
- What is the relationship between module C and module F?
- What is the fan out of module D?
- What is the size of this structure?

Answer

- The depth is the number of detail levels in the structure.
- The width is the overall span of control.
- The width is 4.
- Module C is superordinate to module F (or module F is subordinate to module C)).
- The fan out of module D is 2.
- Size = number of nodes + number of arcs = 15

Question 2

- Consider the following program structure below, and answer the following questions in relation to this structure, showing all working and formulas used where appropriate.

5

Question 2 (cont')

- A. What is the depth of the structure?
- B. What is width of the structure?
- C. What is the fan-in of component H?
- D. What is the fan-out of component B?
- E. What is the size of the structure?
- F. What is the arc to node ration of the structure?

6

Answer

- A. Depth = 4
- B. Width = 6
- C. Fan-in of component H = 1
- D. Fan-out of component B = 2
- E. Size = number of modules + number of arcs = 12 nodes + 14 arcs = 26
- F. Arc to node ration = number of modules/number of arcs = $12/14 = 0.86$
